Version approved by the board of directors on June 22,2023. Page 1 of 15

I. Purpose and Scope of Application

Paris Cité University, hereinafter referred to as "the University", places the highest priority on:

-regarding the confidentiality and security of all information and personal data collected and processed in the course of its operations, particularly in relation to its public service missions;

-concerning the security of IT infrastructure, networks, telecommunications (fixed and mobile), and information processing and storage systems, as well as their usage within its services;

-compliance with legal obligations regarding the protection of personal data and the security of information systems;

-in compliance with legal obligations regarding the right to information, particularly in the context of intellectual property.

The purpose of this charter is to empower everyone to be an active participant in the use and security of the University's Information Systems (VII.a).

This charter establishes the general rules for using the University's information systems in accordance with the legal and regulatory framework that both the User (VII.b) and the University commit to complying with. It outlines the rights and obligations of all parties involved, while incorporating recommendations from the National Commission for Information and Liberty (CNIL) and the National Agency for Information Systems Security (ANSSI). as well as provisions of the RENATER network charter.

It also aims to inform Users about the control measures implemented by the University for Information Systems to ensure their security and proper administration.

This charter, annexed to the University's Internal Regulations, is hereby made known to all users of the University Paris Cité information systems. It is in effect and produces the same legal consequences.

To better understand the charter, users are encouraged to contact the Information Systems Security Officer (RSSI) at Universitérssi@u-paris.fr

a. Relevant individuals

The charter applies to all authorized personnel with access to information systems, including staff members (both licensed and unlicensed), interns, students, residents, employees of University Paris Cité's service providers, occasional visitors, research units and laboratories, as well as any other research institutions.

b. Information systems

The charter covers all information systems owned by the University and/or made available to Users for professional purposes.

c. Relevant uses

The charter applies to the following types of usage, means, and digital resources, regardless of their frequency or periodicity, and whether they occur:

- in the University premises, regardless of their location;
- in the context of remote access, regardless of the location of the access.

As the institution is connected to the national RENATER network, all types of usage of IT and digital resources must comply with the RENATER charter available on the RENATER website.

Version approved by the board of directors on June 22,2023, Page 2 of 15

https://www.renater.fr

II. Usage Principles

a. Use in accordance with applicable laws and regulations

Respect for intellectual property

Paris Cité University reminds that using computer resources requires respecting its intellectual property rights, those of its partners, and more broadly, all third parties holding such rights, including:

- The fees paid by the University for digital content access under copyright agreements cover access to these resources off-campus exclusively for students and staff of Université Paris Cité. Any other User's use of these resources is restricted to viewing on computers located within the university premises.
- It is strictly prohibited to copy, even for personal use, the entirety or substantial portions of digital content licensed to its Users by Université Paris Cité, subject to third-party rights and applicable national and European legislation.
- It is strictly prohibited to distribute any protected content, even for free, to third parties, regardless of its nature, that is made available to students and staff by Université Paris Cité.

Respect for privacy

The right to privacy, the right to one's image under Article 9 of the Civil Code, and the right to representation all mean that no image or information about another person's private life can be posted online without their explicit consent.

Responsibility for online communication and sharing information with third parties

The User shall refrain from, among other things:

- to disseminate defamatory or offensive messages (such acts are punishable by law and/or subject to disciplinary action regardless of whether they are public or private);
- to use certain forms of apologizing (crime, racism, denialism, war crimes, etc.);
- to use any form of provocation to incite racial hatred;
- to disclose confidential information without prior authorization from an authorized person.

The use of Information Systems (including software, applications, services, and digital content) provided to Users by Université Paris Cité is subject to compliance with and implementation of the General Terms of Use, User Guide, or Terms of Use governing their use, which are published on a dedicated page accessible to all Users.

b. General usage

Each User accesses digital resources required for their professional or academic activities under the conditions set by Université Paris Cité.

i. Professional or student use

Electronic communication devices (including computer resources, internet services, and network access) are provided to users for their professional or academic activities at Paris Cité University. Such usage must not violate laws, public order, or compromise the institution's interests and reputation.

Professional activity should be understood as defined by the texts specifying the mission of the public higher education service, namely:

- Initial and continuing training;
- Scientific and technological research, dissemination, and the commercialization of its results;
- Career guidance and professional integration;
- The dissemination of culture and scientific and technical information;
- Participation in the construction of the European Higher Education Area and of

Version approved by the board of directors on June 22,2023, Page 3 of 15

research;

- International cooperation.

ii. For private use only

The private use of Information and Communication Systems is permitted, provided it remains reasonable, non-profit, compliant with applicable laws and regulations, and does not compromise the User's work quality, time investment, or the smooth operation of the service.

In all cases, the additional cost resulting from the residual private use of Information Systems should remain negligible compared to the overall operational expenses.

All information is considered professional, except for data explicitly designated by the User as pertaining to their privacy. Therefore, it is the User's responsibility to store their private data in a designated data space, clearly indicating the private nature of the resource. The User must keep their private information in a folder labeled "private". This dossier may be accessed by the DSIN for remediation purposes following a crisis caused by a cyberattack (see Information System Security Policies).

Storage spaces labeled "My Documents", "Personal", "Staff", or identified by the User's initials are considered to contain professional data.

The User must not convert all storage space provided by Université Paris Cité into a 'private' space; private use should remain limited.

The "private" folder must be placed at the root of its storage space (shared drive/network drive, or the top level in the "My Documents" directory on Windows).

The User is responsible for regularly backing up private data.

iii. Access conditions and authentication

Access to digital resources is based on the use of a "UP account" provided to the User upon arrival at Université Paris Cité. The User's password is linked to this account. The security of this password, which is enforced by a tool provided by the institution, is the User's responsibility.

Authentication methods are personal, confidential, and non-replicable.

c. Specific usage

i. Mobility and remote access

During business travel, regardless of duration or frequency, the User shall safeguard and be accountable for the data and tools of the institution's information system they use.

He must adopt a responsible attitude toward the information, data, and resources of the institution's information systems that he may handle or exchange.

In the event of a confirmed or suspected incident, the User must immediately notify the University's RSSI at rssi@u-paris.fr.

ii. Telecommuting

The University reserves the right to implement telecommuting in accordance with applicable legislation.

Where applicable, authorized telecommuting use must comply with the charter's provisions and all procedures and instructions issued by the University for information system usage.

As part of this initiative, Paris Cité University provides telecommuters with the necessary computer hardware, laptops, and software required for their work.

of their professional activities. The equipment will be provided and maintained by Université Paris Cité and will remain its property.

These computer devices are intended for professional use only, and therefore are exclusively accessible to the university agent. Any use by another member of the family cell is prohibited.

formally prohibited. Additionally, the post's data is professional and must not be shared with household members.

Version approved by the board of directors on June 22,2023, Page 4 of 15

Remote workers must have an internet connection at their work location to access the information systems of Université Paris Cité. If there is an issue with their internet connection,

Remote workers must contact their internet service provider. Additionally, accessing the internet through public networks (such as public Wi-Fi, hotspots, or authentication portals) is prohibited.

To ensure secure communication and data protection, remote workers must not install software not authorized by the Directorate of Information Systems and Digital.

Remote workers must establish a secure connection by activating the VPN (virtual private network) installed on their workstations before accessing the information systems of Paris Cité University.

The right to disconnect

The right to disconnect is designed to safeguard the rest and vacation time of staff at Université Paris Cité, as well as their personal and family life.

It restricts connections to working hours based on employee activity and attendance requirements. Employees are not required to be online outside of their working hours.

iii. Use of IT tools by trade unions

Representative trade unions utilize the computer tools allocated to them for carrying out their union mandate. The use of these tools is conducted without data control.

except for the initial configuration of these tools or intervention during a cyber crisis (such as reviewing logs and application journals, including workstation logs. Example: antivirus log), in accordance with the Information Systems Security Policy.

They have a dedicated email address (organisation.syndicale@u-paris.fr). These email addresses will be the only ones authorized to send communications originating from the union and to

use the distribution lists provided by the administration.

It is noted that all communications between agents and trade union organizations are individual and confidential. Subject to the general system security conditions.

For informational purposes, messages sent to these email addresses are transmitted without blocking or being read by third parties.

iv. Joint research units and specialized defense capabilities

In the case of a UMR, it may impose access restrictions specific to its organization.

Users of these units are required to comply with the Unit Information System Security Policies (PSSI), where applicable, established by their respective governing bodies (University, CNRS, INSERM, INRIA, etc.).

The transmission of classified defense data in accordance with IGI1300 regulations is strictly prohibited, except for devices specifically approved by the National Security Agency of France (ANSSI). Furthermore, all equipment handling classified defense data must maintain the same security classification level as the highest classified data (Secret or Top Secret).

The transmission of data classified as sensitive under Article II No.901 (i.e., sensitive for the organization or classified as Restricted Disclosure) must be processed using encryption methods certified by ANSSI. Information classified as DR (Disclosure Restricted) cannot be processed on equipment lacking this level of protection.

d. Workstation configuration

Paris Cité University provides Users with a workstation equipped with the necessary computer tools to perform their duties. Users must not:

• modify these devices and their operation, configuration, and physical or software setup;

Version approved by the board of directors on June 22,2023, Page 5 of 15

- connect or disconnect networked computer and communication tools without authorization from the internal IT team;
- move computer equipment (unless it is "nomadic equipment");
- disrupt the operation of computer and communication tools.

e. USB Media Management

It is prohibited to connect any equipment not required for professional work to your workstation.

The following equipment (not exhaustive) is prohibited from being connected to the workstation:
Personal or professional mobile phones (they are carriers of numerous security vulnerabilities). However, it is permitted to use phones as Wi-Fi hotspots.
e-cigarettes;
Webcam for personal use;
o...

When using removable storage devices like USB drives or hard drives, it's recommended to verify their safety before connecting them to a professional workstation.
You cannot connect any of these devices if the source of the device is unknown (e.g., a found USB key).

f. Electronic Mail

(a) Terms of Use

All users must use the professional email address assigned to them upon taking office. The email system provided to users is intended for professional purposes (administration, teaching, research). Personal use of the email system is permitted if it does not affect the
staff work or the security of the University Paris Cité's computer network. However, the University recommends using personal devices for personal email purposes.

Any message explicitly stating its private nature shall be protected under the right to privacy and correspondence confidentiality. If not, the message shall be presumed professional.

To make a message private, the message body must contain the "private" tag or the message must be stored in a folder named "Private".

Paris Cité University is barred from accessing files and messages marked as "private" in the agent's message system.

The use of email must comply with the usage rules established and validated by Université Paris Cité:

- message volume;
- Maximum size for sending and receiving messages;
- limited number of simultaneous recipients when sending a message;
- Data confidentiality compliance (no sensitive data shall be transmitted through the messaging system without implementing ad hoc security measures, cf. II No.901)
- management of message archiving.

The transfer of professional messages and their attachments to personal email accounts is subject to the same rules as copying data to external storage devices.

(b) The legal status and value of messages

Email communications exchanged with third parties may legally constitute a contract, provided that the conditions set forth in Articles 1369.1 to 1369.11 of the Civil Code are met.

The User should therefore exercise caution regarding the nature of emails they exchange, just as they would with traditional mail.

Version approved by the board of directors on June 22,2023, Page 6 of 15

(c) Storing and archiving messages

Each User must organize and implement the necessary measures to preserve messages that may be essential or useful as evidence, in accordance with the rules established by the institution's Archives Department.

In this regard, it must in particular comply with the rules set forth in this charter and, where applicable, in the service or institution's established user guides.

g. Fixed-line and mobile telephony

Paris Cité University provides users with both landline and mobile phones for their professional activities.

The use of the phone for personal purposes is permitted, provided it remains minimal.

University Paris Cité staff may impose restrictions on the use of landline and mobile phones based on their duties.

For example, some positions are limited to domestic calls, while others can handle international calls.

Paris Cité University has banned individual tracking of telecom service usage. The institution only compiles aggregate statistics on all incoming and outgoing calls. It ensures that consumption levels stay within the limits of contracts signed with telecom operators.

Paris Cité University has restricted access to complete call records from both the automated switchboard system and mobile devices. However, if there is evidence of clearly abnormal usage, the DSIN (Data Security and Information Network) reserves the right to access full records of individual call logs upon request from the Director General of Services.

h. Internet and Intranet

Users may access websites that are directly and essential to their professional activities, regardless of their nature.

However, occasional and limited use of websites for personal purposes, provided that the content does not violate the law, public order, or compromise the institution's interests and reputation, is permitted.

(a) Publications on the websites and intranets of Université Paris Cité

All publication of professional pages (VII.e) on the University's websites or Intranet, or on its institutional social media accounts, must be approved by a designated site administrator or publication manager, while respecting the academic freedom of researchers.

No private information pages or documents may be published on the University Information System resources, unless specifically permitted in an operational guidelines established by the department or institution.

(b) Downloads

All file downloads, including audio and images, via the Internet must comply with intellectual property rights. Paris Cité University reserves the right to restrict access to files that may be large in size or pose security risks to its information systems (such as viruses that could disrupt the normal operation of Paris Cité University's IT infrastructure, or malicious code). spy programs...)

Conversely, the use of the network to provide services accessible via the Internet must be rational to prevent any abusive or punitive consumption. The provision of sounds, images, videos, software, and all other documents must respect intellectual property rights and align with the educational and research missions of Université Paris Cité.

i. Management of absences and departures

Version approved by the board of directors on June 22,2023, Page 7 of 15

In the event of the User's prolonged absence for any reason or duration, or their departure, the University reserves the right to:

- to implement a reasonable solution for email or other message control
  a solution technique ensuring service continuity (e.g., access to the mailbox
  the individual by the superior in accordance with the protection of personal data);
- to directly access various files, folders, emails, and more
  typically any professional document from the User in the event of a security incident
  or when the activity is jeopardized and upon decision by the Presidency, the Director General of Security (DGS), and the Security and Defense Officer. The user will be notified through the official hierarchy within 48 hours if such a situation occurs.

In case of departure:

- The User must destroy their workspace upon permanent departure from the service or establishment
  private data, the University cannot be held responsible for the
  preservation of this space. If the User has not destroyed this private data space, the University undertakes not to disclose any of its contents to third parties, except as required by regulations, until the material is erased and reallocated.
- The User must ensure proper transmission of professional data to their successor
  tools for ensuring the continuity of public services: the destruction of all or part of these data constitutes a professional misconduct that may, in addition to disciplinary sanctions, lead to criminal prosecution depending on the damage caused to the University;
- The User must return to the internal IT department the equipment provided by the University;
- all User access will be disabled and they will be unsubscribed from all mailing lists
  to which he had subscribed or to which others had subscribed, in order to ensure the continuity of service, to
  the expiration of the university's grace period granted in light of the functions he performed
- Regarding the User's professional email account, the User shall configure an automatic absence notification
  that, if applicable, includes the contact details of their replacement or, in the absence of such information, those of their immediate supervisor. The professional email account and all associated data will be permanently deleted within three months after the agent's departure, unless the Director General of the Directorate General (DGS) grants an exception.

j. Good practices

Electronic Mail

(a) Content of the email messages

To ensure proper service operation, certain restrictions may be implemented. In such cases, the terms are specified in a messaging service user guide that is made available to Users.

(b) Sending and receiving messages

The User must verify the identity and accuracy of message recipients' addresses. They should ensure that message distribution is restricted to designated recipients only, preventing mass messaging, unnecessary clutter in the inbox, and service degradation.

(c) Unsolicited email

Paris Cité University has implemented a spam prevention system. To avoid exacerbating network congestion caused by spam, users are advised to limit their explicit consent for receiving commercial messages, newsletters, subscriptions, or similar content. They should only subscribe to a limited number of mailing lists, particularly those not strictly related to professional contexts.

III. Intellectual Property Protection, Information, and Data

a. Intellectual property, right to image

Version approved by the board of directors on June 22,2023, Page 8 of 15

Using the University's information systems requires respecting intellectual property rights and the right to one's image.

Without this list being exhaustive, the User undertakes to:

- use the software and applications under the license terms agreed upon by the University;
- do not illegally copy software or applications, and in particular, do not attempt to install software or applications for which the University does not hold a license;
- do not reproduce, copy, use, share with third parties, or distribute the databases, web pages, drawings, models, logos, or other creations of the University or third parties protected by copyright or a private right, without having obtained prior authorization from the holder of such rights;
- do not reproduce, copy, or distribute texts, images, photographs, or works musical, audiovisual, or multimedia, and more broadly, any creation or invention originating from from the internet, web applications, or mobile apps, without authorization or a license;
- Do not reproduce, copy, use, or distribute any materials that may harm the reputation or privacy of University users or third parties.

b. Secret and confidentiality

The protection of the University's interests requires the User to uphold a general and perpetual obligation of confidentiality, discretion, and professional secrecy regarding information and data he is aware of in the course of his professional activities.

Complying with this obligation entails, among other things:

- ensure that unauthorized third parties are not aware of such information and data;
- access only information and data directly related to their role, and therefore do not attempt to obtain information reserved for other Users;
- Do not extract or reproduce these confidential information and data without prior approval from the superior, and/or divert their use from normal purposes to non-professional ends;
- generally, to comply with professional ethics and deontological principles, as well as the legal obligations of confidentiality and duty of discretion under the Pors Law (No.83-634), which defines the rights and the obligations of public officials.

The disclosure of any confidential information or data may only occur under the following conditions:

- enabling the transmitter;
- designating an authorized recipient;
- compliance with a secure procedure.

c. Protection of personal data

Paris Cité University places particular emphasis on the protection of personal data. personnel (VII.c) of Users of its IT and digital resources. As the responsible party for The University of Paris Cité's data processing is governed by the provisions of Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 (hereinafter the "GDPR") and the "Information Technology and Freedoms" Act (Law No.78-17 of 6 January 1978 as amended). These legal instruments establish the conditions under which personal data processing may be conducted.

Paris Cité University has appointed a Data Protection Officer (DPO) to oversee compliance with the General Data Protection Regulation (GDPR) and Law No.78-17 of January 6, 1978, as amended, within the university.

The Data Protection Officer must be notified and consulted by the University's services prior to initiating any processing of personal data, to ensure compliance with regulations.

The Data Protection Officer maintains a register listing all personal data processing activities conducted by Paris Cité University.

Each User has the right to access, rectify, delete, transfer, and restrict

Version approved by the board of directors on June 22,2023, Page 9 of 15

the right to be treated and to object to the processing of personal data. These rights are exercised against the data controller within the limits prescribed by law.

The DPD ensures the protection of individuals' data rights. If individuals encounter difficulties in exercising these rights, they may contact the Data Protection Delegate via email at dpo@u-paris.fr or by mail at the following postal address:

The Data Protection Officer at Paris Cité University
Delegated General Directorate for Legal Affairs
85 Boulevard Saint-Germain
75006 Paris

i. Record of processing activities and transparency in processing

The University commits to ensuring that personal data processing is conducted in compliance with applicable regulations.

Therefore, all processing of personal data must be registered in the processing activity register of Université Paris Cité.

Before any processing of personal data is carried out, the affected individuals are informed:

- the data controller and the purposes for which the data are collected
- the legal basis for processing personal data
- whether the collection of personal data and the list of processed data categories are mandatory or optional
- the categories of affected individuals;
- the recipients of the data;
- regarding the duration of data retention;
- safety measures (general description);
- regarding the potential existence of data transfers outside the European Union or automated decision-making processes;
- their rights to information and freedoms and how to exercise them with the University.

This information must appear on any personal data collection materials (forms, etc.).

ii. Purpose of the collected personal data

In line with the principles of minimization and proportionality, Paris Cité University commits to processing only appropriate, relevant, and strictly necessary data for the intended purpose. The University pledges not to process data for purposes other than the original intent, unless it notifies the affected individual and obtains their prior consent for the new purpose.

iii. Confidentiality of personal data

The University ensures that only those who need to know have access to Users' personal data.

All individuals with access to personal data are bound by confidentiality obligations and may face disciplinary actions and/or criminal penalties if they fail to comply with these requirements.

However, it should be noted that data may be disclosed to authorized third parties pursuant to a law, regulation, or a decision by a competent regulatory or judicial authority.

iv. Duration of data retention

The data is stored and retained for the duration required to carry out the one or more

Version approved by the board of directors on June 22,2023, Page 10 of 15

the intended purpose(s) and in accordance with applicable regulations.

IV. Safety Rules

Paris Cité University implements appropriate protection mechanisms on the Information Systems made available to Users.

Specifically, all users of the University of Paris Cité Information Systems must be registered in the university's information systems and have obtained "access codes" —that is, a personal and confidential "login ID and associated password" pair.

The User is hereby informed that access codes serve as a security measure to protect the data and tools they access from malicious or abusive use. This measure does not, however, confer any personal nature to such data or tools.

The User is responsible for the use of their access codes. Voluntarily disclosing them to a third party incurs criminal and civil liability.

The access levels granted to the User are determined by the mission assigned to them. The security requirements of the Information Systems provided to them mandate:

- to follow safety guidelines, including password management rules;
- to keep their password(s) strictly confidential and not disclose them to any third party;
- to comply with access management policies, particularly by not using another User's credentials or attempting to obtain them;
- to protect their electronic certificate (if available) with a secure password kept confidential. The User agrees not to authorize anyone to use the electronic certificate on their behalf.

Meanwhile, ensuring the security of resources provided to the User requires several precautions:
(a) From the University Paris Cité:

- Ensure that sensitive resources are accessible only to authorized personnel;
- Restrict access to only those resources for which the User is explicitly authorized;

Do not allow message redirections for function addresses when the Information System is accessible (after authentication) from both the University network and external sources.

(b) From the User:

All users must comply with the following safety rules:

- Report any suspected violation or attempted violation of your User Account to DSIN (rssi@u-paris.fr), or any general system malfunction;
- Never share your login credentials with third parties;
- Never ask a colleague or coworker for their login credentials;
- Do not hide your true identity;
- Do not impersonate others;

Do not modify or bypass the security settings of the workstation;

Do not copy, modify, or destroy software properties of Université Paris Cité.

- Lock your computer when you leave your workstation;
- Do not access, attempt to access, delete, or modify information that does not belong to him;

Do not post information online or on the Intranet that could harm staff, students, or the University.

- Monitor existing regulations requiring users to disclose what they publish under the University's official label;
- Any copy of data belonging to Université Paris Cité on an external medium must be submitted with the consent of

Version approved by the board of directors on June 22,2023, Page 11 of 15

a senior official and must comply with the rules established by Université Paris Cité;

- Prohibit accessing or attempting to access information systems and third-party communication resources without explicit authorization;
- Do not use the services provided to disclose or share confidential or legally prohibited data and information with third parties;

Do not directly connect to local networks of equipment other than those assigned or authorized by Université Paris Cité, or those specified in an operational manual established by the department or institution. These permissions are strictly personal and cannot be transferred, even temporarily, to any third party. They may be revoked at any time. Any authorization ends when the professional or student activity that justified it ceases.

Do not install, download, or use any software or programs on devices connected to the University Paris Cité network that have not been licensed, are not from trusted sources, or lack authorization from your supervisor.

Do not upload data to internal servers or publicly accessible servers (e.g., Free, Orange, etc.) or to another User's workstation without authorization from authorized administrators.

- Do not intentionally disrupt the proper functioning of IT resources and networks through abnormal hardware manipulation or the introduction of malicious software (virus, Trojan horse, logic bombs...). Any research or other activities that may violate this rule, can only be carried out with the authorization of the University Information System security officer and in strict compliance with the rules that will then be established;
- Comply with the measures implemented by the University to combat viruses and cyberattacks;
- Ensure the protection of its information, particularly sensitive data, by utilizing various individual backup methods or available solutions. Specifically, sensitive data must not be transferred without encryption to unreliable storage devices such as laptops, USB drives, external hard drives, etc.

Do not leave a computer workstation unattended while leaving resources or services accessible. The user must log out by locking the computer.

- The User shall be responsible for safeguarding and managing all equipment provided by the University. In the event of any incident (loss, theft, or damage), the User must immediately notify the relevant authorities to initiate proper procedures such as theft reporting or filing a complaint. The User is obligated to ensure the security of the equipment entrusted to them and must not violate the safety protocols established for such equipment.
- When technically feasible, portable equipment (VII.d) must be specially secured to protect the sensitive documents they may store, including through encryption.

  When a laptop is placed in the office of the agent who uses it, it must be physically secured with the anti-theft device provided for this purpose.

  Using professional smartphones poses unique data privacy risks, especially when devices get lost or stolen. When these devices aren't in use for a few seconds, they should be locked with a secure method to prevent unauthorized access to the data they contain.

External stakeholders must commit to ensuring compliance with this charter by their employees and any subcontracting partners. Accordingly, all contracts between Université Paris Cité and any third parties with access to data, software systems, or other resources must include a clause explicitly stating this obligation.

a. Reporting and information obligations

Paris Cité University must inform the User of all elements that may help them assess the risk level involved in using the Information System.

The User must promptly notify their supervisor of any observed malfunction or any

Version approved by the board of directors on June 22,2023, Page 12 of 15

Any detected anomalies, such as unauthorized access to the Information System, must be reported. Additionally, the Security Officer of Information Systems (rssi@u-paris.fr) should be notified immediately if any unauthorized access attempts are detected.

V. Control Measures

The DSIN (Department of Information Systems and Networks) ensures the proper functioning and security of networks, IT infrastructure, and communication systems at Paris Cité University. Its staff are equipped with technical tools to investigate and monitor the use of established computer systems.

The user is informed:

- For corrective, curative, or evolutionary maintenance purposes, Paris Cité University reserves the right to implement interventions (including remote operations when applicable) on its allocated resources.
- To ensure the security and integrity of the University's information systems, the DSIN reserves the right to isolate, block, or shut down any network traffic or equipment it identifies as problematic (regulatory compliance, security breaches, unauthorized access, etc.).
- that maintenance is preceded by user notification unless urgent measures are required.

Paris Cité University informs the User that Information Systems and Workstations may be subject to monitoring and control for statistical purposes, traceability, optimization, security, or abuse detection.

Control personnel have access to all technical data. They are bound by the duty of confidentiality and must safeguard the confidentiality of any information they become aware of in the course of their duties.

They cannot disclose information they are required to know in the course of their duties as long as:

- this information is protected under the correspondence secrecy principle, or if identified as such, constitutes the User's private life;
- they do not compromise the proper functioning of applications or their security;
- they do not fall within the scope of Article 40, paragraph 2 of the Code of Criminal Procedure, which requires all public authorities to refer criminal facts to the Public Prosecutor.

a. Administration of information systems

To monitor operations and ensure the security of the Information Systems at Paris Cité University, various measures are implemented (e.g., remote administration, centralized log management, etc.).
In accordance with the above paragraph, equipment logs (particularly servers or workstations) and application logs may be retrieved for security monitoring purposes (a retention period will be
applied between 6 months and one year, depending on the relevant application logs).

b. Automatic filtering systems

As a preventive measure, automated filtering systems have been implemented to reduce information flows for Paris Cité University while ensuring data security and confidentiality. These systems specifically include website filtering, removal of unsolicited emails, and blocking certain protocols.

Paris Cité University reserves the right to filter or block access to certain websites, and to conduct pre-access or post-access checks on visited sites along with their corresponding duration limits.

This access is only permitted through the security measures implemented by Université Paris Cité. Specific security rules may be specified, if applicable, in an operational guide established by the DSIN or the institution.

The User is informed of the risks and limitations inherent in using the Internet through training programs or awareness campaigns.

c. Automatic traceability systems

The DSIN of Paris Cité University conducts investigations without prior warning to resolve

Version approved by the board of directors on June 22,2023, Page 13 of 15

malfunctions of the Information Systems or any of its components that jeopardize their operation or integrity.

To accomplish this, it relies on log files that record all connections and connection attempts to Information Systems. These files may contain the following data: date, User ID, IP address, and event object.

Only authorized personnel within the DSIN will have access to this information, which is periodically updated and cleared.

VI. Sanctions

In the event of non-compliance with the rules set forth in this charter and the procedures outlined in the user guidelines, the President of the University may, without prejudice to any legal proceedings or disciplinary actions that may be initiated against the Users, impose usage restrictions as a precautionary measure.

Any misuse of resources provided to the User for non-professional purposes may result in penalties.

Internal sanctions may be imposed, which include:

- initially, through a formal disciplinary notice issued by the DSIN (Department of Social and Information Networks) or the local IT service, following consultation with the Presidency or the General Directorate of Services, in cases of non-compliance with the rules outlined in the charter;
- In the second instance, and in cases of recurrence, following consultation with the Presidency, the General Directorate of Services, or the agent's superior, disciplinary sanctions shall be imposed after submission to the competent authority.

Violations of laws and regulations concerning information system security, personal data protection, privacy, and intellectual property rights (including counterfeiting) are subject to criminal penalties.

VII. Glossary of Key Terms

(a) Information system: a collection of hardware (fixed or mobile), software, applications, digital services, online content, and telecommunications networks provided to the User by the University of Paris City. "Mobile computing" such as personal assistants, laptops, mobile phones, etc., is also a key component of the Information System.

(b) User: any person authorized to access information systems, including authorized personnel or non-tenants, interns, students, residents, staff of companies affiliated with Université Paris Cité, and visitors occasional, research units and laboratories, and any other research structure.
