Preamble

The ISM-IAE recognizes the potential of artificial intelligence (AI) in education and encourages students to use it to enhance their learning. However, its application in academic work must be guided to preserve scientific integrity, intellectual honesty, and the development of students' competencies. This charter aims to establish guidelines for ensuring ethical, transparent, and responsible use of AI, in alignment with the university's academic values.

Objectives

This charter aims to:

Ensure responsible and ethical use of AI in academic research.

Provide guidelines on acceptable practices for using AI.

-Promote transparency and integrity in the use of AI.

Preventing academic fraud and AI-related abuses.

-Develop students' understanding of the limitations and potential of AI.

Definitions

Artificial Intelligence (AI): "a machine-based system designed to operate with varying degrees of autonomy and capable of demonstrating adaptability after deployment. For explicit or implicit purposes, it derives from the data it receives how to generate outcomes such as predictions, content, recommendations, or decisions that can influence physical or virtual environments (...)". Chapter 1, Article 3 of the European Regulation on Artificial Intelligence (RIA), effective as of August 2, 2024.

AI refers to any software, platform, or technology capable of performing tasks by simulating human intelligence, including but not limited to Large Language Models (LLMs)and all generative AI. It's important to note that current AI systems lack consciousness and intentional capabilities. They remain tools designed to serve human needs.

Academic works: include all individual or collaborative projects completed during university studies, such as exams, dissertations, reports, presentations, case studies, projects, memos, theses, and more.

General Principles for Using AI

-Intellectual autonomy: AI serves as an auxiliary tool rather than a substitute for critical thinking and personal creativity. Students must demonstrate a thorough grasp of the subject and make substantial intellectual contributions to their work, independent of AI.

-Transparency: All AI usage must be explicitly documented. This includes specifying the AI used, the queries executed (e.g., prompts), and the nature of the AI's contribution to the work.

-Responsibility: The student remains fully responsible for the quality, accuracy, and originality of their work. The use of AI does not exempt them from this responsibility.

Ethics: The use of AI must adhere to the university's ethical principles, particularly regarding plagiarism and copyright compliance.

-Confidentiality: The use of AI must respect the confidentiality and protection of personal data, corporate data, or ISM-IAE data.

-Limitations of AI: Students must be aware of the potential limitations and algorithmic biases of AI and incorporate them into their work. It is essential to verify the relevance and accuracy of information provided by AI.

Authorized use of AI

AI can be used as a tool to assist with:

-Get suggestions for references and authors, but this is strongly discouraged: it doesn't replace traditional research done through a general search engine and

from specialized reference databases (https://www.bib.uvsq.fr/ressources-de-droit-et-eco-gestion). Moreover, generalist AI systems produce rather poor results, often containing errors and fabricated information.

-While suggestions for concepts or theories relevant to a specific topic or course may be obtained, they often lack depth: the proposed ideas are limited to a repetitive and dated set of theoretical contributions. Therefore, it's essential to conduct thorough research through appropriate sources.

-Benefit from academic text assistance (articles, books, chapters) provided that the student has read the original text and verified the accuracy of the information.

Facilitate the understanding of concepts and theories in research or course advancement.

-Guide the logical structuring of a work by suggesting a preliminary plan or argumentative progression.

-Identifying inconsistencies, weak arguments, or missing connections between ideas to improve content independently produced by the student.

-Serve as a language assistant to translate texts into different languages, or to correct spelling, syntax, or typographical errors.

-Generate images, graphics, or illustrations for educational purposes while respecting copyright.

Prohibited use of AI

It is strictly prohibited to:

-Present a work (e.g., a presentation, slides, case studies, etc.) that was entirely or partially created by AI, without any personal input or explicit mention of AI usage.

-Use AI for tasks (in class, remotely, independently, etc.) that are officially prohibited.

-Fully delegate to AI the execution of various stages of a research project (e.g., literature search, problem formulation, literature review, data generation, result discussion, etc.).

-Creating or falsifying qualitative or quantitative data, particularly through the use of AI. This includes fabricating or modifying research data, generating fabricated results, and altering real data to achieve desired outcomes.

-Generating and using illegal, discriminatory, or harmful content remains the student's sole responsibility.

Feed the AI with dental content documents, including those from your hosting company or ISM-IAE.

Consequences in case of non-compliance

Failure to comply with this charter may result in sanctions, depending on the severity of the violations. These may range from a simple warning to, if applicable, initiating disciplinary proceedings in accordance with the regulations in force.

In case of any doubts regarding the use of artificial intelligence, teachers reserve the right to request explanations or supporting documentation. Such materials may be considered in the evaluation of submitted work, in compliance with applicable pedagogical and regulatory procedures.

Update and Evaluation

This charter will be regularly revised and updated to reflect technological advancements and best practices in academic ethics and integrity.

acceptance and undertaking

By signing this charter, the student confirms having read, understood, and accepted the rules outlined above. They commit to adhering to this charter and using AI responsibly and ethically throughout their studies at ISM -IAE.
